From Academic Press : Human Vaccines: Emerging Technologies in Design and Development a fact sheet discussing how cancer vaccines are used to harness the body's immune system to protect against cancer-causing viruses

and as immunotherapy to treat vaccines an international peer reviewed open access journal Human Vaccines: Emerging Technologies in Design and Development:

Human Vaccines Emerging Technologies in Design and Development discusses the advances in molecular biology biophysics and informatics among other disciplines that have provided scientists with the tools to create new vaccines against emerging and re emerging pathogens For example the virus like particle technologies that led to licensing of highly efficacious HPV vaccines have only come into full realization in the last 10 years Their success About the Author Prof Modjarrad is Adjunct Assistant Professor of Medicine at the Johns Hopkins University School of Medicine Attending on infectious diseases consult service at the main hospital 1 month per year Responsible for teaching residents and fellows
